Third mission activities in quality assurance systems

Do theory and practice match?

Sofia Bruckmann, Maria J. Rosa & Loraine Nazaré

14th European Quality Assurance Forum - Supporting Societal Engagement of Higher Education

TU Berlin, 21 – 23 November 2019
Presentation outline

- Research aims
- Background of the study
- Methodological approach
- Main findings
- Final remarks
Research aims

Case study of a public Portuguese university

• How far along is it in terms of integrating performance indicators (PIs) for Third Mission (TM) activities in its Quality Assurance System (QAS)?

• Proposal of a set of relevant PIs that could enhance the assurance of TM activities at this institution.
greater attention to quality issues and to data gathering
basis for the creation of internal quality assurance systems (QAS)
Background
Background

Community services
Partnerships

- Partnership with business
- Research with impact on the community
- Consultancy services
- Technology transfer
- Lifelong learning/Continuing education
- Links to industry
- Educational outreach activity
- Science parks
- Spin-off firms
- Business ventures
- Patents
Background

Third mission should not be conceptualised as a separate mission. It ‘entails a good deal of mission overlap’ (Enders and Salerno (2008)).
What about third mission in quality assurance systems?

• definition of indicators and methodologies for measuring TM activities is still underdeveloped in most HEIs
Nevertheless, there are already some approaches to analysing TM activities and defining a set of indicators to measure them just as with education and research.

E3M-Project – European Indicators and Ranking Methodology for University Third Mission

Three main dimensions:  
• Continuing Education,  
• Technology Transfer and Innovation, and  
• Social Engagement

Final set of 54 indicators

(Carrión, García-Gutiérrez, Bas and Carot, 2012)
Methodological approach

Case study of a Portuguese public university
Methodological options include:

• a thorough review of relevant literature on this topic
• content analysis of internal and external documents
  - university’s strategic plan
  - quality manual
  - self-assessment report for certification of the institution’s QAS
  - guidelines from the Portuguese assessment and accreditation agency (A3ES)
  - European standards guidelines (ESG)
• analysis of the university’s QAS for an identification of possible PIs that address third mission activities’ assessment
Methodological approach

Third mission

- Continuing Education
- Technology Transfer and Innovation
- Social Engagement
Main findings

The university has fully embraced TM activities as a core mission

The [university’s] mission is to create, share and apply knowledge, involving the whole community through teaching, research and cooperation with the surrounding environment, in order to make a clear difference for individuals and society. (Mission statement)
Main findings

The university’s **strategic plan** argues for:

- a strong commitment to TM activities by referring to an institutional strategy geared to boosting income, which is then related to cooperation,
- an active contribution to regional development, to strengthen entrepreneurship, as well as knowledge and technology transfer.

*The [university] must have a leading role in the economic and social development of the region, based on an innovation and scientific and technological model that promotes cooperation (...).*

*It must also train qualified technical staff for sectors expected to have an increasing presence in the region, with special attention to lifelong learning programmes (...) (Strategic plan)*
Main findings

The university’s **strategic plan** further refers to the creation of an Institute for Cooperation meant to be the organisational structure where all activities associated to TM will be concentrated.

It defines the goal of incorporating the subsystems of research and cooperation with society in the institution’s internal quality assurance system (IQAS) and of specifically developing internal performance indicators for cooperation.
Where does this institution stand in terms of integrating TM in its QAS?

Analysis of the university’s Quality Manual (2016) reinforces the argument for a commitment to cooperation with society as a core mission of the institution.

There is a set of indicators for cooperation with society, which are already identified in the Quality Manual, defined in association with specific goals that the university has set out to achieve.

The indicators defined are mostly addressed to financial issues, number of contracts, number of patents, number of new incubated companies, employability issues, and number of initiatives.
Main findings

A3ES reference framework for IQAS (Reference 7 – External relations)

• The Agency considers the inclusion of TM activities in QA mechanisms as part of ‘a sound and well developed internal quality assurance system’

_The institution adopts mechanisms to promote, assess and enhance collaboration with other institutions and with the community, namely regarding its contribution to regional and national development._

_In the ambit of its external relations policy, the institution has in place procedures to promote, monitor, assess and enhance interface and external action activities (…) (A3ES Reference Framework for Internal Quality Assurance Systems)_
The university’s Self-assessment Report acknowledges that its IQAS is more developed in the area of teaching & learning. However, it also argues for an incorporation of other quality assurance procedures, as established by national institutions.

The internal quality assurance procedures are executed in a global way (…), and there is evidence of the existence of strategies and policy supported in documents (…).

In these documents relevant indicators for this area are defined, for example: the value of external contracts (in mil. Euros) included in the Contract-Programme, and representing the funds raised through protocols, doctoral fees and research projects.

(University’s Self-assessment Report)
Main findings

The final report by the External Evaluation Committee (CAE) acknowledges that:

- the university has an institutional policy for cooperation
- it has developed a set of indicators for the assessment of the impact and monitoring of regional development policies

The CAE classifies the degree of development of the institution’s IQAS, both in terms of its third mission activities and globally, as **substantial**
Main findings

CAE agrees with the university on the need for further development of specific instruments and mechanisms in the area of cooperation with society, acknowledging the need to ‘overcome shortages in relevant indicators for the assessment of the impact and monitoring of policies of regional development.’

This university’s IQAS has been certified by A3ES, which means it complies with A3ES criteria for certification, as well as its set of reference points, in spite of the shortages identified.
Main findings

Set of possible indicators for TM activities that could be considered as specifically appropriate for this university, considering:

• the university’s strategic options
• the three dimensions previously identified and that we consider apply to this university (Continuing education, Technology transfer and innovation, and Social engagement)
• the indicators identified in the E3M Project
<table>
<thead>
<tr>
<th>Continuing education</th>
<th>Technology transfer and innovation</th>
<th>Social engagement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Existence of a strategy for continuing education, included in the mission statement and/or in the strategic plan</td>
<td>Existence of a strategy for technology transfer and innovation, included in the mission statement and/or in the strategic plan</td>
<td>Existence of a strategy for social engagement activities, included in the mission statement and/or in the strategic plan</td>
</tr>
<tr>
<td>Degree of development of quality assurance procedures for continuing education activities</td>

</tbody>
</table>
Main findings

An interesting future exercise would be to look at these indicators and for each one ask the following two questions:

- Degree of relevancy. How relevant is this indicator for the university?
- Degree of data collection. Is the university already collecting the necessary data to calculate each of these indicators?

<table>
<thead>

<td>Partially collected</td>
</tr>
<tr>
<td></td>
<td>Not relevant</td>
<td>Not collected</td>
</tr>
</tbody>
</table>
Final remarks

- the Portuguese public university of our case study clearly embraces TM activities as one of its core missions
- although present to a certain degree in QA mechanisms, it still lacks full integration with specific performance indicators in its QAS
- in terms of QA, TM activities are still at an embryonic stage

We can therefore speak of a mismatch between theory and practice

It was possible to establish a set of PIs that could be appropriate for this institution, suggesting a future exercise of testing their degree of relevance and data collection.
Thank you!
