

How to measure openness?

Open Science Career Evaluation Matrix (OS-CAM)

- Areas to be considered
 - Research output
 - Research process
 - Service and leadership
 - Teaching and supervision
 - Professional experience

Open Science Career Assessment Matrix (OS-CAM)	
Open Science activities	Possible evaluation criteria
RESEARCH OUTPUT	
Research activity	Pushing forward the boundaries of open science as a research topic
Publications	Publishing in open access journals Self-archiving in open access repositories
Datasets and research results	Using the FAIR data principles Adopting quality standards in open data management and open datasets Making use of open data from other researchers
Open source	Using open source software and other open tools Developing new software and tools that are open to other users
Funding	Securing funding for open science activities
RESEARCH PROCESS	
Stakeholder engagement / citizen science	Actively engaging society and research users in the research process Sharing provisional research results with stakeholders through open platforms (e.g. Arxiv, Figshare) Involving stakeholders in peer review processes
Collaboration and Interdisciplinarity	Widening participation in research through open collaborative projects Engaging in team science through diverse cross-disciplinary teams
Research integrity	Being aware of the ethical and legal issues relating to data sharing, confidentiality, attribution and environmental impact of open science activities Fully recognizing the contribution of others in research projects, including collaborators, co-authors, citizens, open data providers
Risk management	Taking account of the risks involved in open science activities
SERVICE AND LEADERSHIP	
Leadership	Developing a vision and strategy on how to integrate OS practices in the normal practice of doing research Driving policy and practice in open science Being a role model in practicing open science
Academic standing	Developing an international or national profile for open science activities

Research Assessment in the Transition to Open Science

2019 EUA Open Science and Access Survey Results

Bregt Saenen, Rita Morais,
Vinciane Gaillard and Lidia Borrell-Damián
October 2019

Academic Career Assessment for Open Science:

How to proceed?

Gunnar Sivertsen

Nordic Institute for Studies in Innovation, Research and Education, Oslo, Norway

How to proceed? Four ideas based on:

1. The 2019 EUA Open Science and Access Survey Results
2. The Open Science Career Assessment Matrix (OS-CAM)

Still far to go?

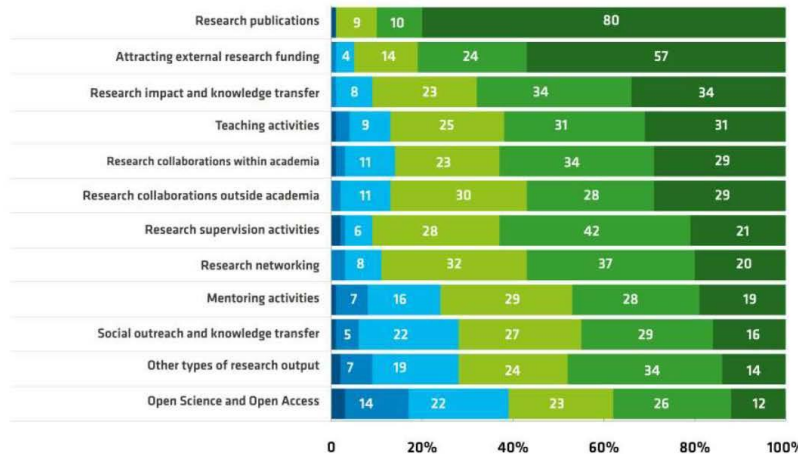

Summary

- Universities consider themselves autonomous, but are keenly aware of external pressures
- Research assessment is primarily, but not only developed at the institutional and faculty/department level
- Publishing research and attracting external research funding makes careers in research
- Quantitative metrics (JIF and h-index) and qualitative peer-review are the leading methods for careers in research
- Open Science and Open Access are not commonly part of the incentive and reward system for researchers
- Universities are starting to review their research assessment practices, but are moving in different directions

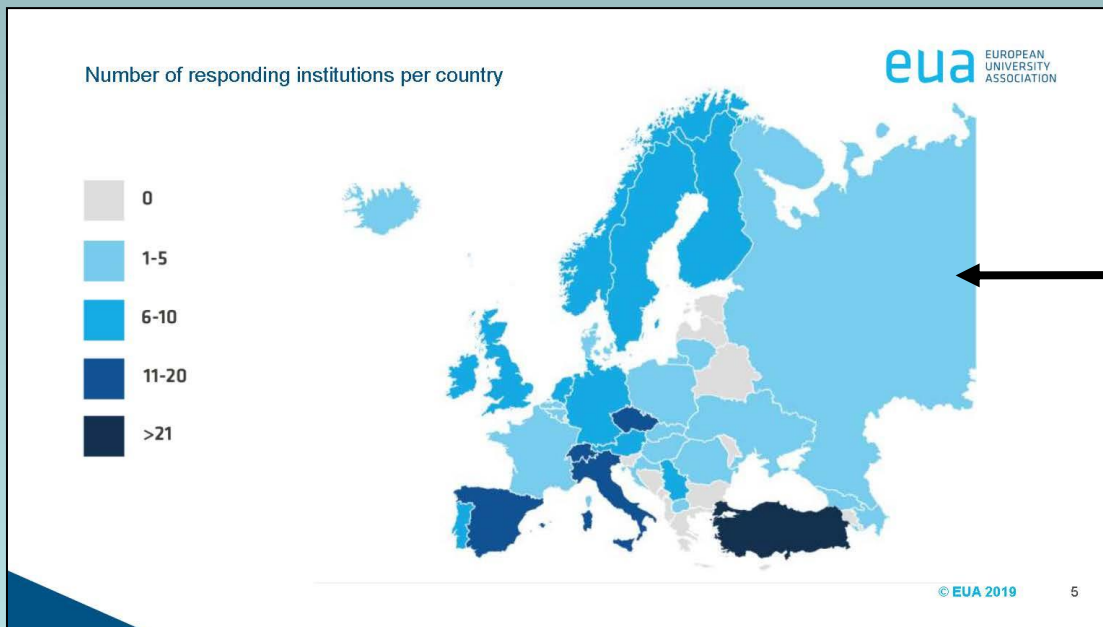

Which types of academic work matter most for research careers?

Number of responses:
between 191-195/197

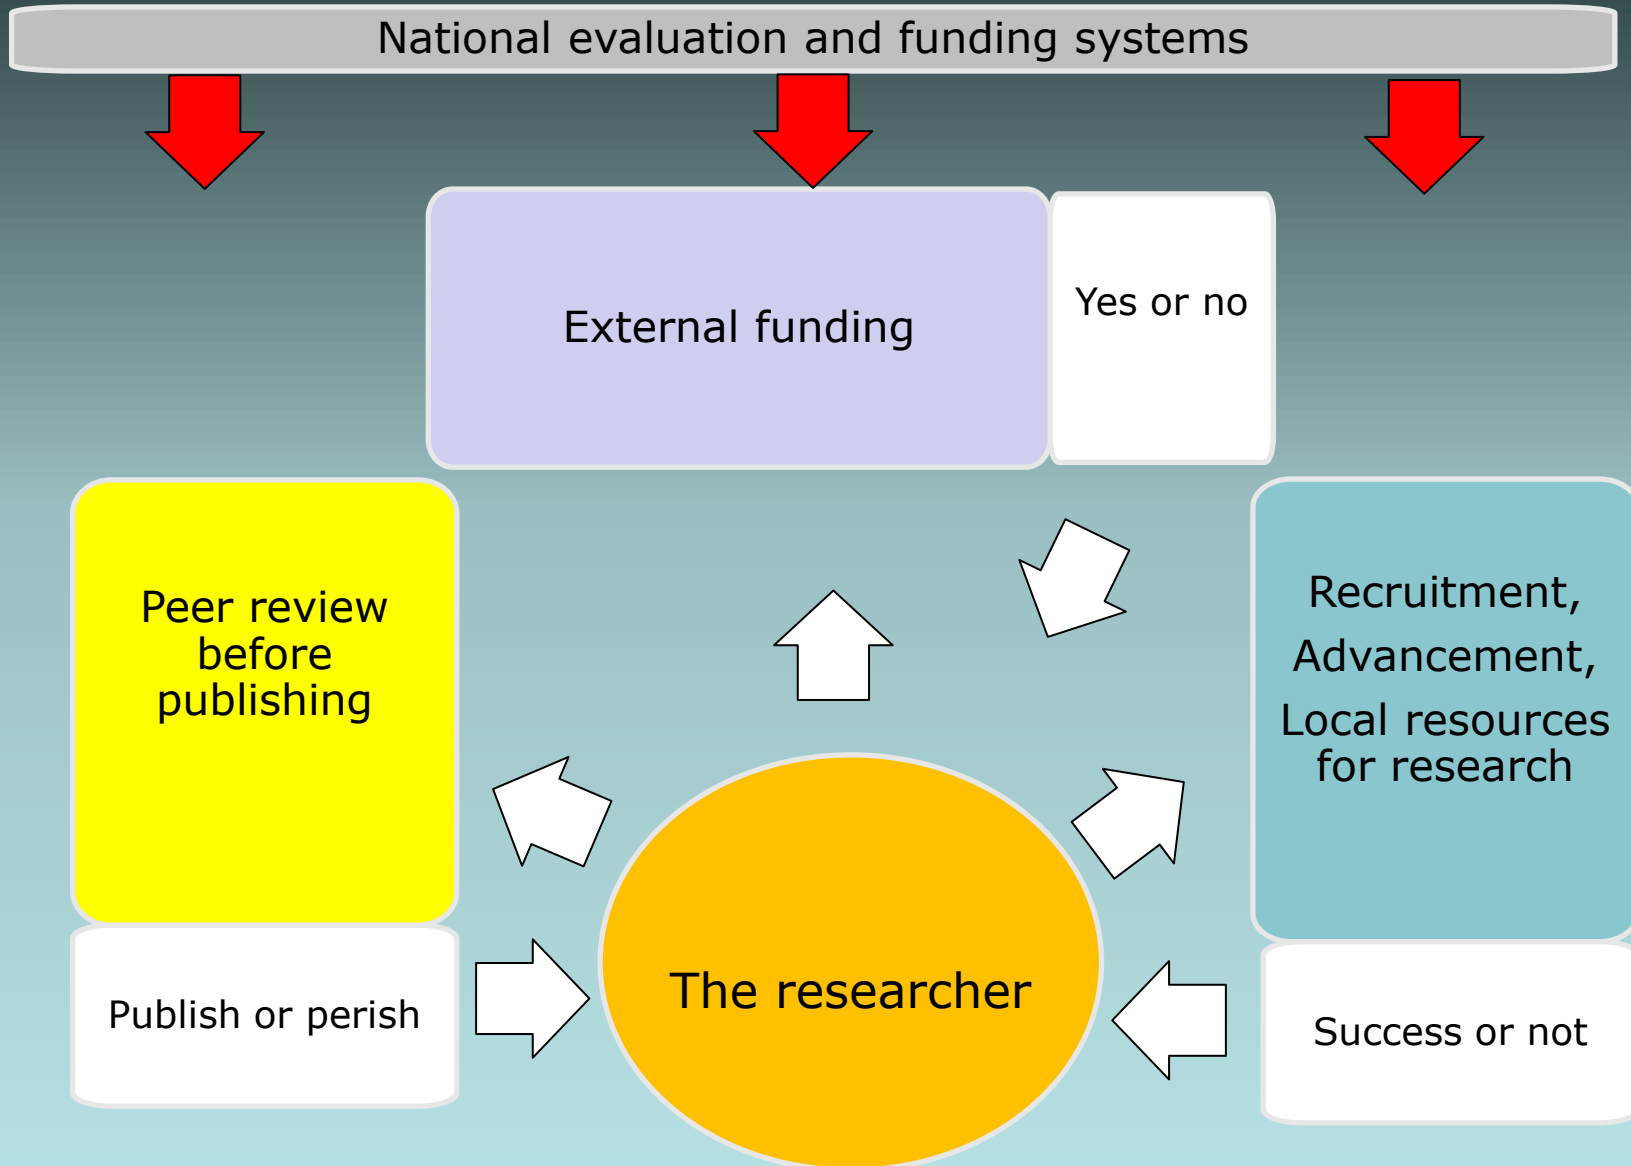

The dynamics of observing differences: Mutual learning as a next step?

“The findings in this report give a **general impression** of European university approaches to research assessment. It should be made clear that the results **do not capture important national and disciplinary differences.**”

Can we learn from some of the member universities?

National evaluation and funding systems as a constraint on Open Science Career Development

How to proceed? Four ideas based on:

1. The 2019 EUA Open Science and Access Survey Results
 - Create mutual learning by observing differences and providing good examples
 - Overview and discuss national evaluation and funding systems from the perspective of universities and OS
2. The Open Science Career Assessment Matrix (OS-CAM)

A working group appointed by Universities Norway is currently exploring how dimensions from OS-CAM can be used in a general national guide for the assessment of researchers and projects

How to measure openness?

Open Science Career Evaluation Matrix (OS-CAM)

- Areas to be considered
 - Research output
 - Research process
 - Service and leadership
 - Teaching and supervision
 - Professional experience

Open Science Career Assessment Matrix	
Open Science activities	Possible evaluation criteria
RESEARCH OUTPUT	
Research activity	Pushing forward the boundaries
Publications	Publishing in open access journals Self-archiving in open access repositories
Datasets and research results	Using the FAIR data principles Adopting quality standards in datasets Making use of open data from other sources
Open source	Using open source software and tools Developing new software and tools
Funding	Securing funding for open science activities
RESEARCH PROCESS	
Stakeholder engagement / citizen science	Actively engaging society and researchers Sharing provisional research results on open platforms (e.g. ArXiv, Figshare) Involving stakeholders in peer review
Collaboration and Interdisciplinarity	Widening participation in research projects Engaging in team science through open science
Research integrity	Being aware of the ethical and confidentiality, attribution and activities Fully recognizing the contributions, including collaborators, co-authors
Risk management	Taking account of the risks involved in open science
SERVICE AND LEADERSHIP	
Leadership	Developing a vision and strategy on how to integrate OS practices in the normal practice of doing research Driving policy and practice in open science Being a role model in practicing open science
Academic standing	Developing an international or national profile for open science activities

The ambition is to create a general guide for Norway and to report back to EUA

OS activities are **integrated in general activities**

OS criteria are **integrated in general criteria**

Reflection (why important)

Open Science Career Assessment Matrix (OS-CAM)

Open Science activities

Possible evaluation criteria

RESEARCH OUTPUT

Research activity	Pushing forward the boundaries of open science activities
Publications	Publishing in open access journals Self-archiving in open access repositories
Datasets and research results	Using the FAIR data principles Adopting quality standards in open data management Making use of open data from other researchers
Open source	Using open source software and other open tools Developing new software and tools that are open
Funding	Securing funding for open science activities

RESEARCH PROCESS

Stakeholder engagement / citizen science	Actively engaging society and research users in the research process Sharing provisional research results with stakeholder platforms (e.g. Arxiv, Figshare) Involving stakeholders in peer review processes
Collaboration and Interdisciplinarity	Widening participation in research through open collaboration Engaging in team science through diverse cross-disciplinary collaborations
Research integrity	Being aware of the ethical and legal issues related to research Confidentiality, attribution and environmental impact Fully recognizing the contribution of others including collaborators, co-authors, citizens, open science
Risk management	Taking account of the risks involved in open science activities

SERVICE AND LEADERSHIP

Leadership	Developing a vision and strategy on how to integrate open science into the normal practice of doing research Driving policy and practice in open science
-------------------	---

Academic standing	Being a role model in practicing open science Developing an international or national profile for open science activities Contributing as editor or advisor for open science journals or bodies
Peer review	Contributing to open peer review processes Examining or assessing open research
Networking	Participating in national and international networks relating to open science

RESEARCH IMPACT

Communication and Dissemination	Participating in public engagement activities Sharing research results through non-academic dissemination channels Translating research into a language suitable for public understanding
IP (patents, licenses)	Being knowledgeable on the legal and ethical issues relating to IPR Transferring IP to the wider economy
Societal impact	Evidence of use of research by societal groups Recognition from societal groups or for societal activities
Knowledge exchange	Engaging in open innovation with partners beyond academia

TEACHING AND SUPERVISION

Teaching	Training other researchers in open science principles and methods Developing curricula and programs in open science methods, including open science data management Raising awareness and understanding in open science in undergraduate and masters' programs
Mentoring	Mentoring and encouraging others in developing their open science capabilities
Supervision	Supporting early stage researchers to adopt an open science approach

PROFESSIONAL EXPERIENCE

Continuing professional development	Investing in own professional development to build open science capabilities
Project management	Successfully delivering open science projects involving diverse research teams
Personal qualities	Demonstrating the personal qualities to engage society and research users with open science Showing the flexibility and perseverance to respond to the challenges of conducting open science

How to proceed? Four ideas

- The 2019 EUA Open Science and Access Survey Results
 1. Create mutual learning among universities by observing differences and providing good examples
 2. Create an overview and discussion of national evaluation and funding systems from the perspective of the universities and Open Science

- The Open Science Career Assessment Matrix (OS-CAM)
 3. Develop OS-CAM into a general national guide and report back to EUA
 4. Investigate possible documentation sources to avoid heavier burdens of evidence on individuals
